

ECA Opens Membership to Current and Potential Nuclear Host Communities

Energy Communities Alliance (ECA) is pleased to announce membership opportunities for communities that host or are interested in hosting future public or private nuclear facilities.

Private or public nuclear facilities include:

- Existing and potential nuclear energy, nuclear fuel production or manufacturing facilities and projects;
- Advanced nuclear projects;
- Nuclear storage or nuclear disposal facilities;
- Decommissioned and decommissioning nuclear facilities;
- National Laboratories;
- Science and Defense facilities; and
- Ancillary facilities related to nuclear missions.

Who is ECA?

ECA is the non-profit association representing local governments, elected officials, and community leaders in communities that host or are impacted by nuclear missions.

For over thirty years, ECA has been bringing together:

- Mayors
- Councilors
- Commissioners
- Chief Executives
- City/County Managers
- Economic development entities

to share information, establish policy positions, and ensure that municipalities are meaningfully engaged and their environmental, safety, health, and economic priorities are considered in decision-making that directly impacts nuclear host communities.

Why Join ECA?

As an organization with members that host nuclear facilities and support critical advanced nuclear research and demonstration projects, ECA recognizes an opportunity to connect communities – those currently hosting commercial nuclear facilities and those considering new nuclear development – and advocate for the local governments that are key to determining where new projects will be sited. By working together to share lessons learned, build capacity, identify shared priorities and leverage resources, ECA will amplify the voices of communities on nuclear policymaking, as well as social, technical and economic development issues.

What Does ECA Do?

Information Sharing

Regular meetings and peer exchanges; bulletins, legislative updates, and coverage of breaking nuclear news.

Analysis of Trends

Analysis of policies, programs, and trends within the nuclear complex; comprehensive reports on various issues.

Power in Numbers

Participating in national forums and advisory groups; establishing ties with industry, states, tribes, local governments, organized labor, advocacy groups, and environmental groups; sponsoring workshops and other educational forums. Working across Congressional delegations and with the Administration.

Interested in being part of ECA?
